

## Safety Reminder: Natural Gas Meters in Snow

*Clear away deep snow from the area around your gas meter and from outside vents of your furnace and natural gas appliances.*

**1. Keep a clear path to your meter so that professionals can access in the event of an emergency.**

**2. Do not use plows or snow blowers near the meter or other HVAC equipment to avoid damage. Use a broom or just do it by hand.**

A lot of snow has fallen in a short amount of time with plenty of wind to create big drifts. Please make sure to check your HVAC vents and natural gas or propane regulators. If they are covered in snow they need to be dug out.

Snow or ice build up can damage a natural gas meter or regulator, interrupt service, or cause an appliance to malfunction which can create a safety hazard.
